Background:
Endometriosis is a fairly common disease in women and is a major cause of chronic pelvic pain, infertility and significant morbidity and disability. Rectovaginal endometriosis is one of the most advanced and complex forms of the disease affecting approximately 3.8% to 37% of patients with endometriosis. The rectum and sigmoid colon are affected in 74% of cases of bowel endometriosis.

Proposal:
To write a review article on “Diagnosis, management and long-term outcomes of recto-sigmoid endometriosis”

Methods:
Systematic review of the literature.

Student role:
Literature review and co-author of review article.
